 Olivia Lin

I started out as a field engineer (FAE) and moved into product and project management. For a couple of years I visited pharmacy clients almost daily — setting up systems, running training, and fixing whatever broke on site, from networks to hardware, often bringing spare parts to swap equipment myself. That habit of starting from the customer's real problem has stuck. Today I run our CMS website platform and a government OTT video platform, working with dev and design to build what clients need and ship it.

IMPACT HIGHLIGHTS

12 Sites Merged

30→7 Days to Launch

–70% Support Tickets

+75% Order Efficiency

KEY PROJECTS

CMS Website Platform (built from scratch)

Product Owner / Lead PM

- Brought 12 client sites that were each maintained on their own onto one shared CMS platform, which made upkeep and spinning up new sites far easier
- Getting a client from request to a live site used to take about 30 days; on the platform it is down to around 7
- Time to launch a new client site dropped by more than half

Government OTT Video Platform

Project Manager

- Took over an NT\$5M multi-year government project — roughly 20K monthly active users and 200K+ video and news items
- Kept the existing service running while shipping new features, and presented operations to the government client every quarter
- Handled the security and paperwork side they required — vulnerability scans, app-security checks, and audit documents

Pharmacy ERP & On-site Support

FAE → moved into PM

- Visited close to 100 pharmacies a month, helping with inventory, NHI claims, and walking staff through new systems
- When a server, network, or device went down I went on site to fix it — sometimes just bringing a spare part to swap in; most issues were solved on the spot (~80%), and major outages cleared about 3 hours faster
- Later connected an online store to automatic order handling, replacing manual work and making order processing about 75% faster

EXPERIENCE

Product & Project Manager | dgFactor Co., Ltd.

June 2025 ~ Present

- Run the CMS website platform; took the old “one project, one site, each maintained on its own” approach and merged it into a single platform — 12 clients moved over so far
- Also manage maintenance and new features for an NT\$5M government OTT video platform
- The team used to track requirements over chat and word of mouth; we moved to GitHub Projects for requirements, bugs, and release notes, kept in line with ISO 27001 documentation and audits

Product / Project Consultant | Computer Systems Integration Company (Remote)

October 2025 ~ January 2026

- Came in as an outside consultant to help a pharmacy-software company set up project management, bring in Gitflow, and get their process into ISO 27001 shape

Field Application Engineer (FAE) | FMBS Information Technology Consulting

November 2023 ~ December 2024

- Technical support for close to 100 pharmacy clients — ERP upgrades, NHI claims, system rollouts, and going on site to fix broken hardware and networks

Food & Beverage Operations | Earlier Experience

2018 ~ 2023

- Worked the floor in busy restaurants, from taking orders and serving to restocking — got used to keeping things steady when it is hectic or something goes wrong

SKILLS

Areas Pharmacy ERP & NHI Claims • System Rollout & On-site Support • Government Project Operations • CMS Website Platforms • OTT Video Services

What I've Done Requirement Interviews • PRD Writing • Roadmap & Release Planning • User Training • Client Communication • Troubleshooting • ISO 27001

Tools GitHub Projects • Git • Figma • Mermaid • Jira • Notion • Claude Code • Codex CLI • Gemini CLI • Google Analytics

Languages Chinese / Taiwanese (Native) • English (Intermediate)

EDUCATION

National Taipei University | Public Administration and Policy

2019 ~ 2021
